

Sprint 1 Report
Qvinyl
5 Lost DJ's
July 9 , 2018

Actions to stop doing

- Stop scrum meetings that go over 15 minutes
 - Since we often work on the project after each scrum meeting, we sometimes have elongated meetings where scrum questions are answered as we work, which makes meetings very inefficient
 - Should have more structure, so we should end the scrum meeting before we begin any actual work
- Being ambiguous about what tasks to do
 - All of us are learning new frameworks, so we learn to help each other and complete tasks together
 - Now that we have finished researching for the most part, we should now delegate tasks so team members can work on tasks individually

Actions to start doing

- Have **daily** scrum meetings at a scheduled time
 - Update each other on the status of our tasks
 - So that we know who to help or which task needs more time
- Update scrum board after each meeting
 - move around post-it notes as needed
- Update the git repository
 - state what was changed/deleted/added after every push

Actions to keep doing

- Have work sessions after meetings
 - Forces us to work on the project together, so it's easier to check on everyone's progress
- Delegate tasks to team members in beginning of week to be researched and implemented throughout the week
 - Everyone has a task initially to learn, so no time is wasted
 - When team members need help, other team members who are more well-versed in the framework can be of assistance

Work completed/not completed

- Completed:
 - User Story 1: As a user, I want to be able to play music so that I can share my music with friends.
 - User Story 2: As a user, I want to know what's currently playing and so I can see the artist and song name.
 - User Story 3: As a user, I want to be able to add to the queue of upcoming songs to play so I can share my music with my friends
- Not Completed:
 - User Story 2, Task 2: Progress bar to visually indicate the progress of the song
 - We decided to scrap this since it's a livestream of a song, so progress of the song isn't actually needed
 - User Story 3, Task 2: Viewing list of queued songs, playlist
 - Since we only have local database, there's no reason to list out the list of queued songs because Firebase database iterating and printing is going to be completely different
 - This task is moved to the backlog to be done later

Work completion rate

- Total User Stories Completed: 2
- Total estimated ideal work hours: 50 hours
- Total number of days: 7
- Ideal work hours per day: 7
