

Sprint 3 Plan
Due: July 24, 2018
5 Lost DJ's
Qvinyl

Goal

Create the front-end with great design and is user-friendly, so that users are easily able to learn how to use the website.

User Story Tasks

1. As a user I want to be able to easily navigate around the web app's design and functionalities.
 - Task 1: Come up with a redesign of the application that allows for better navigation through the app (decide where each button should be, come up with a easy to use UI)
 - (8 hours)
 - Task 2: Bootstrap the side navigation bar and add room button pops out a box to input information
 - (3 hours)
 - Task 3: Bootstrap main landing page, make sure the queue and list of users are organized and fit within the page
 - (3 hours)
 - Task 4: Design the Player so that it's a blurring strip of the video (with blurred background) initially, and when pressing the collapse button it'll show the video
 - (3 hours)
 - Task 5: Make sure Chat is bootstrapped and its CSS isn't affecting the rest of the application
 - (3 hours)
 - Task 6: Design the interactions between a user and the website and make sure animations are smooth, utilizing ReactStrap modal boxes for different boxes
 - (10 hours)
 - Task 7: Redesign the side navigation bar so that it'll list all the available rooms and clicking on a room will dynamically load all of the room's content, and loading into the room will show the room name
 - (12 hours)
 - Task 8: Add thumbnail of tracks in queues, name and duration of song
 - (3 hours)
 - Task 9: Add youtube search functionality, uses youtube API to grab search results
 - (10 hours)
 - Task 10: Implement the "leave room" and "remove room" functions
 - (3 hours)
 - Task 11: Create showing of list of users and the ability to kick users and make another user admin
 - (2 hours)
 - Task 12: Design Logo
 - (3 hours)

- Task 13: Redesign of navigation bar to be a current song playing, marquee of song name, logout button and welcoming user name
 - (5 hours)
- Task 14: Visualized downvotes controlling skipping of songs
 - (3 hours)

Total: 71 hours

2. As a user I want to be able to create an account or sign in so I can have my personal account to identify me.

- Task 1: When the user isn't signed in, they should be redirected to the login landing page
 - (3 hours)
- Task 2: Fix authentication issues: When the user is logged in and they aren't in a room yet, sometimes an authentication error exists due to how fast it takes to grab the userID from Firebase
 - (5 hours)
- Task 3: Redesign the login page using React and use React Router to redirect to different pages of the application (registration, login with firebase)
 - (15 hours)

Total: 23 hours

Total for all User Stories: 94 hours

Team Roles

Jacqueline (SM): Front-end

Kevin: Front-End

Kai: Full-Stack

Prajna (SM): Front-End

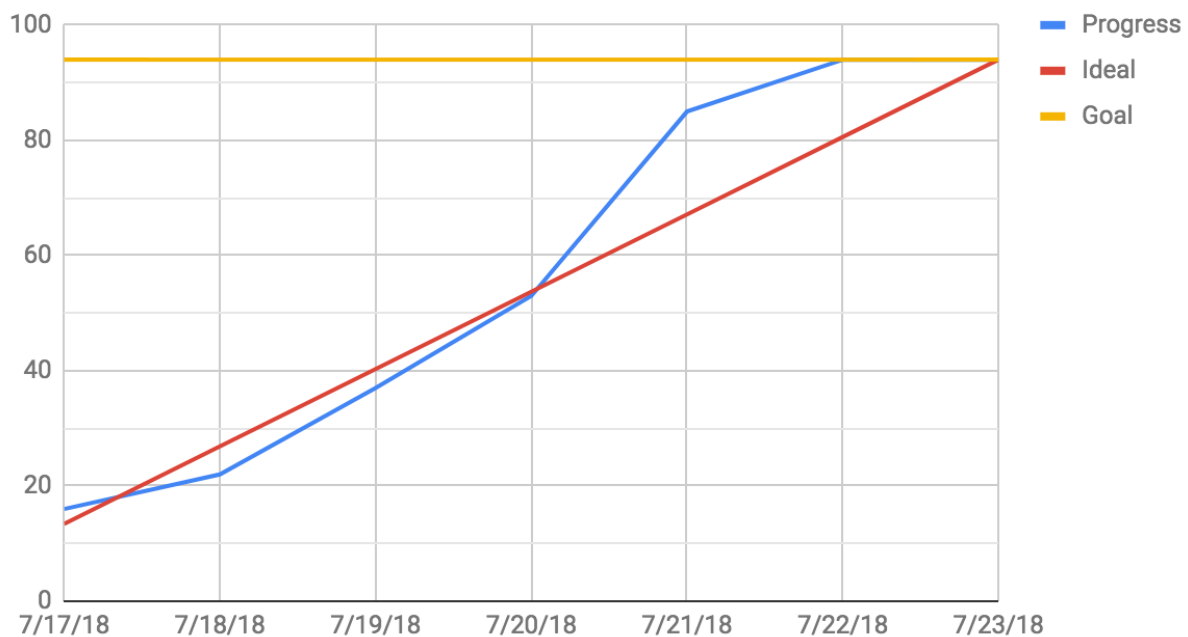

Joshua: Full-Stack

Task Assignment

Jacqueline:	US 1	Bootstrapping components, UI rehaul
Kevin:	US 1	Help with Front-End
Kai:	US 2	Bug fixing Back-end, UI rehaul, pull data/use from YouTube API
Prajna:	US 1	Help with Front-End
Josh:	US 2	Bug fixing Back-end, implement list of room and users
