

Login and Register

Login Functions:

- `handleSubmit()`

Unit Tests:

- Used list of firebase Functions in `Auth.js`
- For `handleSubmit`, we tested it by seeing if every input and login would result in an update to the firebase authentication table.

Register Functions:

- `handleSubmit()`

Unit Tests:

- Used list of firebase Functions in `Auth.js`
- We tested this by registering many accounts to test whether or not a `displayName` would be updated to the `currentUser`.
- After many tests, there still seems to be issues on updating user display names and emails.
